Summary

Third-year B.Tech CSE (AI) student with hands-on experience in machine learning, deep learning, and full-stack development. Solved LeetCode problems across Easy, Medium, and Hard difficulty, with advanced skills in Dynamic Programming, Divide & Conquer, and Union-Find. Passionate about applying AI to space exploration and autonomous systems, and actively seeking AI research internships and engineering roles.

Education

Kakinada Institute of Engineering & Technology (KIET) 2024 – May 2028
B.Tech — Computer Science & Engineering (Artificial Intelligence) Kakinada, India

- Coursework focused on Artificial Intelligence, Machine Learning, and Data Structures & Algorithms.

Skills

Languages: Python, JavaScript, HTML, CSS
ML / AI: TensorFlow, PyTorch, Scikit-learn, Pandas, NumPy, Matplotlib, RAG (Retrieval-Augmented Generation)
Web / Frameworks: React, Node.js, Full-Stack Development
Domains: Machine Learning, Deep Learning, Data Science, NLP, Computer Vision, Robotics, IoT, DSA
Tools / Cloud: Git, GitHub, VS Code, Jupyter Notebook, Cloudflare
CP Skills: Dynamic Programming (×8), Hash Table (×4), Greedy (×3), Binary Search (×3), Divide & Conquer (×2), Union-Find (×1)

Experience

Fiverr (@astroyuvinut) Remote
AI/ML Freelancer Feb 2026 – Present

- Delivered end-to-end AI/ML and web development projects for clients across diverse domains.
- Managed the full project lifecycle — requirement gathering, development, testing, and delivery.
- Maintained professional client communication and documentation for each engagement.

SprintM Technologies (Startup India / NIP) Remote
AI/ML Intern 2025

- Completed a hands-on AI/ML internship building and training machine learning models on real-world datasets.
- Applied Python, Scikit-learn, and deep learning frameworks across guided, project-based AI/ML work.
- Earned the “AI & Machine Learning with Hands-on Projects” completion certification (Cert ID: SMTCC010290).

Projects

ReelRAG — Side-by-Side Video Comparison Chatbot Python · RAG · Cloudflare · NLP

- Built a RAG-powered chatbot that compares two videos side by side — paste two YouTube or Instagram URLs and it fetches transcripts and metadata, then answers conversational questions about both.
- Grounded every response with citations to the specific video and transcript chunk it drew from, enabling precise, verifiable comparisons.
- Designed for creators analyzing why one reel outperforms another — going beyond single-video summarization to true head-to-head analysis.

Heart Stroke Prediction System

Python · Scikit-learn · Pandas

- Built a binary classification pipeline to predict stroke risk from patient health records.
- Applied logistic regression, XGBoost, and ensemble methods with feature engineering and class-imbalance handling (SMOTE).
- Focused on model interpretability for clinical use.

Space Expo — AI Satellite Data Analysis Model

Python · NumPy · Simulation

- Designed a conceptual AI-assisted system to analyze satellite telemetry patterns and simulate orbital mission parameters.
- Demonstrated how ML pipelines can support real-time space research and mission automation workflows.

Satellite Trajectory Predictor

Python · Physics-based Modeling

- Built a simulation tool predicting satellite orbital paths by combining physics-based equations with data-driven refinement — showcasing the intersection of AI and aerospace engineering.

AI-Driven Browser

Python · NLP

- Developed an intelligent browser featuring AI-powered smart search, real-time content summarization, and context-aware navigation using NLP techniques.

Certifications

Tata — GenAI Powered Data Analytics Job Simulation	Forage	Feb 2026
Introduction to Data Science	Infosys Springboard	Oct 2025
AI/ML Internship Completion	SprintM Technologies (Startup India / NIP)	2025
AI & Machine Learning with Hands-on Projects	SprintM Technologies (Startup India / NIP)	Oct 2025
Full Stack Developer	SEOK & SprintM
